Mobile: +91-8310721762

## EDUCATION

- ITM Skills University** Navi Mumbai, India  
*B.Tech in Computer Science Engineering; CGPA: 9.44* 2024 – 2028

## SKILLS SUMMARY

- Languages:** Python, JavaScript, Dart, SQL
- Backend:** Django, FastAPI, Node.js, Express.js, REST APIs
- Mobile:** Flutter
- Databases:** PostgreSQL, MySQL, MongoDB, Firebase Firestore (NoSQL)
- Cloud & DevOps:** AWS EC2, AWS S3, Cloud Shell, Firebase (Auth, FCM, Storage), Cloudinary
- Tools:** Git, Linux
- AI/LLM:** LLM fine-tuning, LangGraph, LangChain, LangFuse

## EXPERIENCE

- AyuApp Health Pvt Ltd** Remote  
*Backend & AI Intern* Jan 2026 – Present
  - **Backend APIs:** Built Django APIs for secure medical record storage, retrieval, and event-based organization.
  - **AI Pipelines:** Implemented AI-driven document ingestion and categorization for scanned medical data.
  - **LLM Systems:** Developed chatbot workflows using structured prompts, memory handling, and tool execution.
- Tibzee – AI-Powered EdTech Platform** Remote  
*Full-Stack Developer* 2025 – Present
  - **Mobile & Backend:** Developed Flutter app using Dart with Firebase Authentication and Firestore.
  - **Cloud Integration:** Integrated Cloudinary, Firebase Storage Buckets, and FCM notifications.
  - **System Design:** Designed scalable APIs, access control, and optimized data models.

## PROJECTS & HACKATHONS

- **Gemini + LangGraph Chatbot (Production):** Built a production-ready chatbot using FastAPI, LangGraph, and Gemini 2.5 Flash with persistent memory, tool routing, session management, and background task scheduling.
- **:** Deployed backend on Render and frontend on Streamlit Cloud with live APIs, monitoring, and performance profiling (p95 ~1.5s).
- **Samruddhi – EHR System (Mumbai Hacks):** Designed a full-stack EHR system with structured patient data, hospital workflows, role-based access, and scalable backend architecture.
- **:** Focused on backend modeling, API design, and clinical data consistency under hackathon constraints.
- **FinSight – Personal Finance Management App:** Built a MERN-based finance platform implementing the 50/30/20 budgeting rule with JWT authentication, expense categorization, and asset/debt tracking.
- **:** Implemented REST APIs, MongoDB schemas, and frontend state management for financial insights.
- **Clyra – AI Insurance Claims Processing System:** Developed a production-grade MERN system with AI-based document extraction, priority-queue claim processing, and fraud detection logic.
- **:** Applied DSA concepts (priority queues, graphs) with secure role-based authorization and cloud storage.
- **Social Media Insights – Level Supermind Hackathon:** Collected and analyzed Instagram engagement data using Meta Graph API, AstraDB, Langflow, and Google Gemini API.
- **:** Generated structured, data-driven performance insights from real engagement metrics.

## CAREER OBJECTIVE

- Computer Science undergraduate focused on backend systems, full-stack development, cloud infrastructure, and applied AI, with hands-on experience through internships, hackathons, and startup projects.
